ACT

Rules mapping made easy

vanderbiltindustries.com

ACT Enterprise is the role-based access control software suite for ACTpro hardware and streamlines the installation, management and monitoring of the ACTpro access control system. **The latest release of ACT introduces rules mapping into the system.**

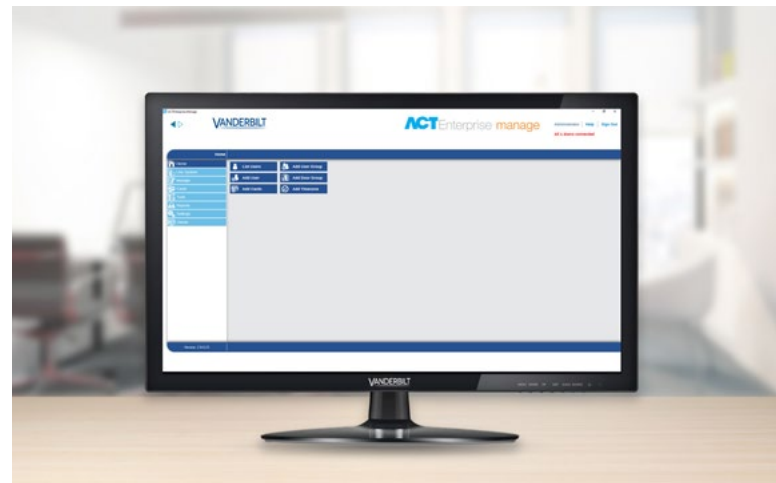

One of the key features of the latest version of ACT is the use of **rules mapping** to enable advanced configurations of triggers. These can be actioned on events such as system input and output change, and card swipe outcomes across the access control system as well as other elements of an integrated system such as intrusion system events.

ACT Enterprise **rules mapping** engine offers the customer an intuitive method to create rules based on access control events and Boolean logic. The use of

Highlights:

- ✓ Create 'cause & affect' rules
- ✓ Intuitive
- ✓ Easy-to-use
- ✓ Trigger detection

rules mapping simplifies the implementation of more complex events/alarms and associated actions for the installer/integrator, by permitting the creation of logical relationships between system elements via a drag-and-drop interface.

For the end user, the addition of **rules mapping** ensures that system interactions can be seamlessly introduced on a system-wide basis, thus enabling a higher level of added value to be realised, both for security and business-based functionalities.

So when the boss swipes in at the front gate the system can turn all his lights on along with the air con and get the coffee machine going before he reaches his desk!
