

# VANDERBILT

## The Retail Sector

Our solutions can be the right bargain for you

Vanderbilt has a range of products across Access Control, Intrusion Detection, and Video Management for the retail sector. Our solutions offer a multi-layered security approach for round the clock protection while delivering a substantial reduction in thefts.

## We understand the issues you face

- ✓ Shrinkage
- ✓ Internal theft necessitates role-specific access control
- ✓ Spurious slip and fall claims require high-resolution video recording to protect retailer
- ✓ Luxury concession tenants requiring rigorous intruder alarms

## Central Control

SPC IP monitoring and control reduces overall cost of ownership and allows for future proof solutions with audio and video verification. SPC offers the ability to monitor and detect intruders quickly, with professional grade detectors ensuring superior and accurate rates of detection that reduce false alarm, callouts and insurance premiums.

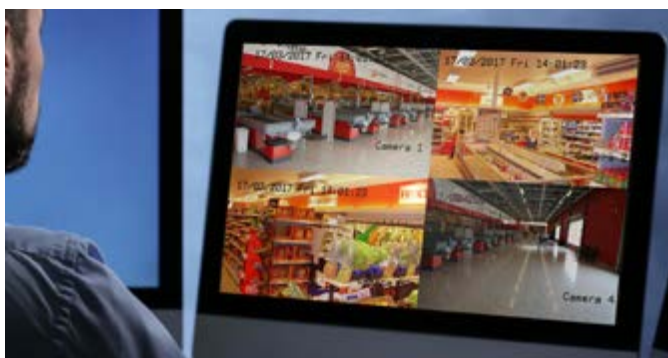

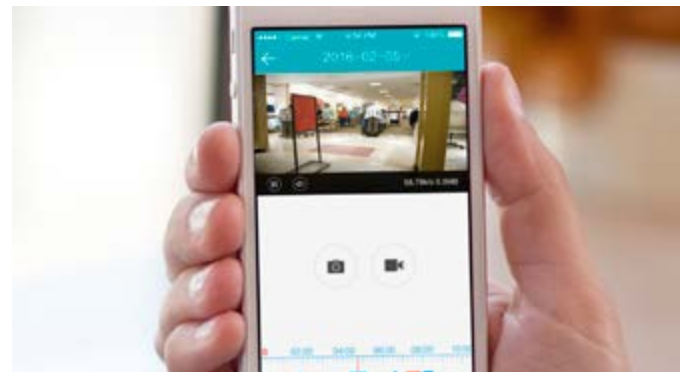

## Health and Safety

Software such as ACTEnterprise helps enhance health and safety at stores with long opening hours. The software creates an audit trail ensuring that workers don't become stranded in remote areas or spend too long in locations like refrigeration rooms.

## Remote Monitoring

When dealing with early morning deliveries, a retail manager can identify the courier through a live video feed on their ACT365 smartphone app, and then remotely open the doors of the loading bay to allow the delivery to be made.

## Video Surveillance

As customers shop, Eventys video can monitor shop floors and tills. When issues arise, such as long queues, the video surveillance control room operator can contact the store manager to open more tills.
